### REC\_DS using C\_Week 1\_COD\_Question 3

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Imagine you are working on a text processing tool and need to implement a feature that allows users to insert characters at a specific position.

Implement a program that takes user inputs to create a singly linked list of characters and inserts a new character after a given index in the list.

##### ***Input Format***

The first line of input consists of an integer N, representing the number of characters in the linked list.

The second line consists of a sequence of N characters, representing the linked list.

The third line consists of an integer index, representing the index(0-based) after

which the new character node needs to be inserted.

The fourth line consists of a character value representing the character to be inserted after the given index.

### ***Output Format***

If the provided index is out of bounds (larger than the list size):

1. The first line of output prints "Invalid index".
2. The second line prints "Updated list: " followed by the unchanged linked list values.

Otherwise, the output prints "Updated list: " followed by the updated linked list after inserting the new character after the given index.

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 5

a b c d e

2

X

Output: Updated list: a b c X d e

### ***Answer***

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
typedef struct Node
```

```
{
```

```
    char data;
```

```
    struct Node* next;
```

```
} Node;
```

```
Node* createNode(char data)
```

```
{
```

```
    Node* newNode = (Node*)malloc(sizeof(Node));
```

```
    newNode->data = data;
```

```
    newNode->next = NULL;
```

```
    return newNode;
```

```
}
```

```
void printList(Node* head)
```

```
{
```

```
    Node* temp = head;
```

```
    while (temp != NULL)
```

```
{
```

```
    printf("%c ", temp->data);
```

```
    temp = temp->next;
```

```
}
```

```
    printf("\n");
```

```
}
```

```
void insertAfter(Node* head, int index, char newChar)
```

```
{
```

```
    Node* current = head;
```

```
    int count = 0;
```

```
    while (current != NULL && count < index)
```

```
{  
    current = current->next;  
    count++;  
  
}  
if (current == NULL || count != index)  
{  
  
    printf("Invalid index\n");  
    return;  
  
}  
Node* newNode = createNode(newChar);  
newNode->next = current->next;  
current->next = newNode;  
  
}
```

```
int main()
```

```
{  
  
    int N, index;  
    char newChar;  
  
    // Read number of characters in the linked list  
    scanf("%d", &N);  
  
    Node* head = NULL;  
    Node* tail = NULL;  
  
    // Create the linked list from input characters  
    for (int i = 0; i < N; i++)  
{
```

```
char data;  
scanf(" %c", &data); // Read each character with space  
Node* newNode = createNode(data);
```

```
if (head == NULL)
```

```
{
```

```
    head = newNode;  
    tail = head;
```

```
} else
```

```
{
```

```
    tail->next = newNode;  
    tail = newNode;
```

```
}
```

```
}
```

```
// Read the index and the new character to insert  
scanf("%d", &index);  
scanf(" %c", &newChar);
```

```
// Check if the index is valid  
if (index >= N)
```

```
{
```

```
    printf("Invalid index\n");
```

```
} else
```

```
{
```

```
    insertAfter(head, index, newChar);
```

```
}
```

```
// Print the updated list
```

```
printf("Updated list: ");
```

```
printList(head);
```

```
// Free the allocated memory
```

```
Node* temp;
```

```
while (head != NULL)
```

```
{
```

```
    temp = head;
```

```
    head = head->next;
```

```
    free(temp);
```

```
}
```

```
return 0;
```

```
}
```

**Status :** Correct
