### REC\_DS using C\_Week 5\_COD\_Question 5

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

In his computer science class, John is learning about Binary Search Trees (BST). He wants to build a BST and find the maximum value in the tree.

Help him by writing a program to insert nodes into a BST and find the maximum value in the tree.

##### ***Input Format***

The first line of input consists of an integer N, representing the number of nodes in the BST.

The second line consists of N space-separated integers, representing the values of the nodes to insert into the BST.

##### ***Output Format***

The output prints the maximum value in the BST.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 5

10 5 15 2 7

Output: 15

### **Answer**

```
#include <stdio.h>
#include <stdlib.h>

struct TreeNode {
    int data;
    struct TreeNode* left;
    struct TreeNode* right;
};

struct TreeNode* createNode(int key) {
    struct TreeNode* newNode = (struct TreeNode*)malloc(sizeof(struct
TreeNode));
    newNode->data = key;
    newNode->left = newNode->right = NULL;
    return newNode;
}

struct TreeNode* insert(struct TreeNode* root, int key){
    if (root == NULL)

    {
        return createNode(key);
    }
    if (key < root->data)
    {
        root->left = insert(root->left, key);
    } else
    {
        root->right = insert(root->right, key);
    }
}
```

```

        return root;
    }
    int findMax(struct TreeNode* root)
    {
        if (root == NULL)
        {
            return -1;
        }
        while (root->right != NULL)
        {
            root = root->right;
        }
        return root->data;
    }

    int main() {
        int N, rootValue;
        scanf("%d", &N);

        struct TreeNode* root = NULL;

        for (int i = 0; i < N; i++) {
            int key;
            scanf("%d", &key);
            if (i == 0) rootValue = key;
            root = insert(root, key);
        }

        int maxVal = findMax(root);
        if (maxVal != -1) {
            printf("%d", maxVal);
        }

        return 0;
    }

```

**Status :** Correct

**Marks :** 10/10
